Sequence 141, Application WS. US20050266493A1

GENERAL INFORMATION:

APPLICATY: Millannium Pharmaceuticals, Inc.

APPLICANT: Millannium Pharmaceuticals, Inc.

APPLICANT: Schlegel, Robert

APPLICANT: Manakar, Subhangi

APPLICANT: Monahan, John E.

APPLICANT: Monahan, John E.

APPLICANT: Monahan, John E.

APPLICANT: Monahan, John E.

APPLICANT: Morention: NOVEL GENES, COMPOSITIONS, KITS, AND

TITLE OF INVENTION: THERAPY OF COLON CANCER

TITLE OF INVENTION: WETHOOS FOR 121/186, 284

CURRENT FILING DATE: 2002-07-21

PRIOR APPLICATION NUMBER: US 60/339, 971

PRIOR APPLICATION NUMBER: US 60/319, 988

PRIOR PILING DATE: 2002-03-05

NEORMATION: biomarker peptide M3951.6, nerve growth factor
OTHER INFORMATION: inducible Neurosecretory protein vaccinia virus
OTHER INFORMATION: growth factor (VGF) mature peptide
FEATURE:
NAME/KEY: PEPTIDE
LOCATION: (26)..(62)
OTHER INFORMATION: biomarker peptide M3687.7, N-terminal fragment of
OTHER INFORMATION: nerve growth factor indicible Neurosecretory
OTHER INFORMATION: protein vaccinia virus growth factor (VGF)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 170, Application US/10360101

GENERAL INFORMATION:

APPLICANT: Leenhouts, Cornelis J.

TILE OF INVENTION: Export and modification of (poly) peptide in the lantiblotic way FILE REFERENCE: 2183-5673

CURRENT APPLICATION NUMBER: US/10/360,101

CURRENT FILING DATE: 2002-077

PRIOR FILING DATE: 2002-05-24

NUMBER OF SEQ ID NOS: 309

SOUTHARE: Patentin version 3.1

                                                                                                                                                          SUBCELLULAR LOCATION: Secreted.

PTW: Two different processing pathways probably exist in antral decells. In the dominant pathway progastrin is cleaved at three sites resulting in two major bioactive gastrins, gastrin-34 and gastrin-17. In the putative alternative pathway, progastrin may be processed only at the most C-terminal dibasic site resulting in the synthesis of gastrin-71.

PTM: Sulfation of Tyr-87 blocks peptide degradation and enhances
Am. J. Physiol. 279:G903-G909 (2000).
-!- FUNCTION: Gastrin stimulates the stomach mucosa to produce and secrete hydrochloric acid and the pancreas to secrete its adjacently enzymes. It also stimulates smooth muscle contraction and increases blood circulation and water secretion in the stomach

-I- FUNCTION: Gastrin stimulates the stomach mucosa to produce and secrete hydrochloric acid and the pancreas to secrete its dispessive enzymes. It also stimulates smooth muscle contraction and increases blood circulation and water secretion in the stomach
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Phenylalanine amide (G-93 provides amide
